

**to the customers of farmsaat AG**

**GMO DECLARATION**

We confirm that we completely avoid the knowingly use of any genetically modified organisms (GMOs) in our entire breeding and multiplication process. farmsaat has had seed samples tested for GMO contamination of foreign origin during the multiplication and preparation process by way of example and at considerable cost. No measurable levels of GMOs were found.

The varieties of which we supply seeds for sowing 2026 are varieties which are not subject to the regulatory requirements of genetic engineering law. In addition, quality assurance measures have been applied in the production of the seeds of these varieties, the aim of which is to avoid the adventitious presence of genetically modified organisms (GMOs) which are subject to labelling requirements.

Seed multiplication is nevertheless carried out in open fields under natural conditions with free pollen dispersal. It is therefore not possible to completely exclude the accidental presence of GMOs and to guarantee that the seed lots of our deliveries are free from any traces of genetically modified plants. Furthermore, it must be pointed out at this point that accidental traces of genome-modified plants cannot be clearly proven according to the current state of science or assigned to the method used.

farmsaat produces certified seed in accordance with the current EU rules on the marketing of seed. The seed marketed/trading by farmsaat complies with all the legal requirements applicable to the seed product at a high-quality level.
